- Web Development Level 2
- JavaScript & jQuery
- Flexbox, Grid, & Bootstrap
- WordPress for Developers
- Git Going: An Intro to Git
- Coding Tips & Tricks
- HTML Email
- PHP & MySQL Bootcamp

Course Outline

Front-End Web Development

Front-end code works in a web browser, whereas the back-end code works on a web server.

HTML: Create web pages and emails using HTML code to mark up content (text, images, etc.)

CSS: Style the contents of a webpage or email.

JavaScript & jQuery: Add interactivity, animation, and more to webpages.

Responsive Web Design: Create pages that are optimized for all size screens.

Code Management & Deploying Sites

FTP: Upload your files to make the site go live.

Git: Keep a history of code changes, and merge your code with other developers.

GitHub & Bitbucket: Work with other developers using remote Git repositories.

Web Design & Graphics

Layout webpage designs using Photoshop.

Create and optimize web graphics for fast download.

Back-End Web Development

WordPress: Learn to create custom WordPress themes for the most commonly used CMS (content management system).

PHP & MySQL: Build dynamic web pages and interact with a database.
